7. Click on "Sign In." When the "Authentication Needed" window appears.

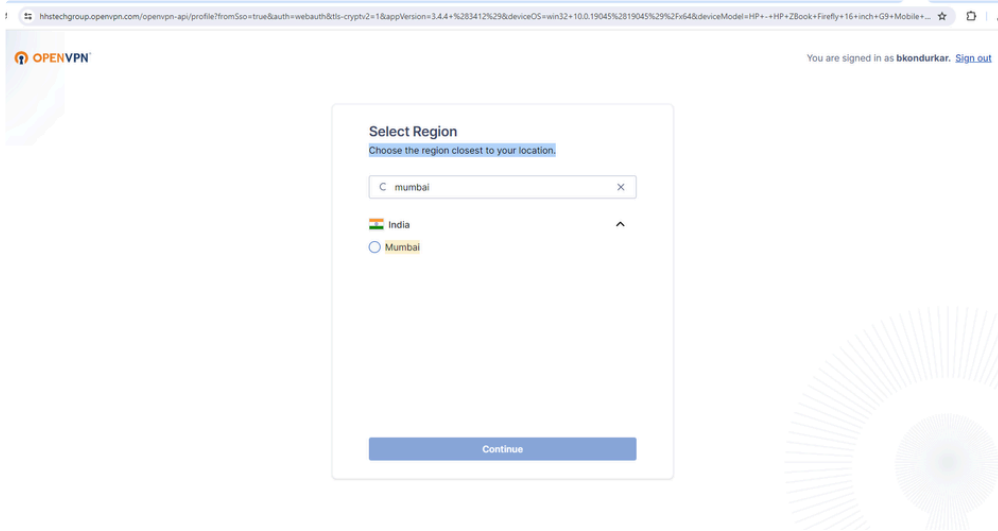

8. Once you click on "Sign In," it will open the credentials page in your browser.

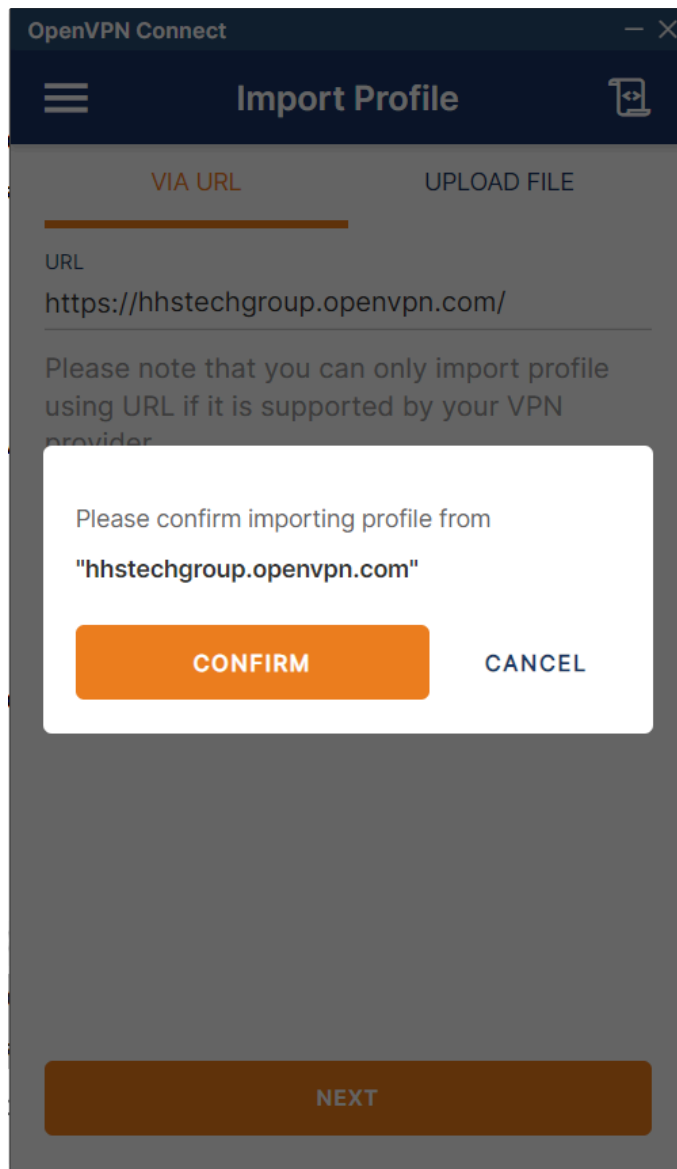

9. After successfully signing in, the "Select Region" screen will appear.

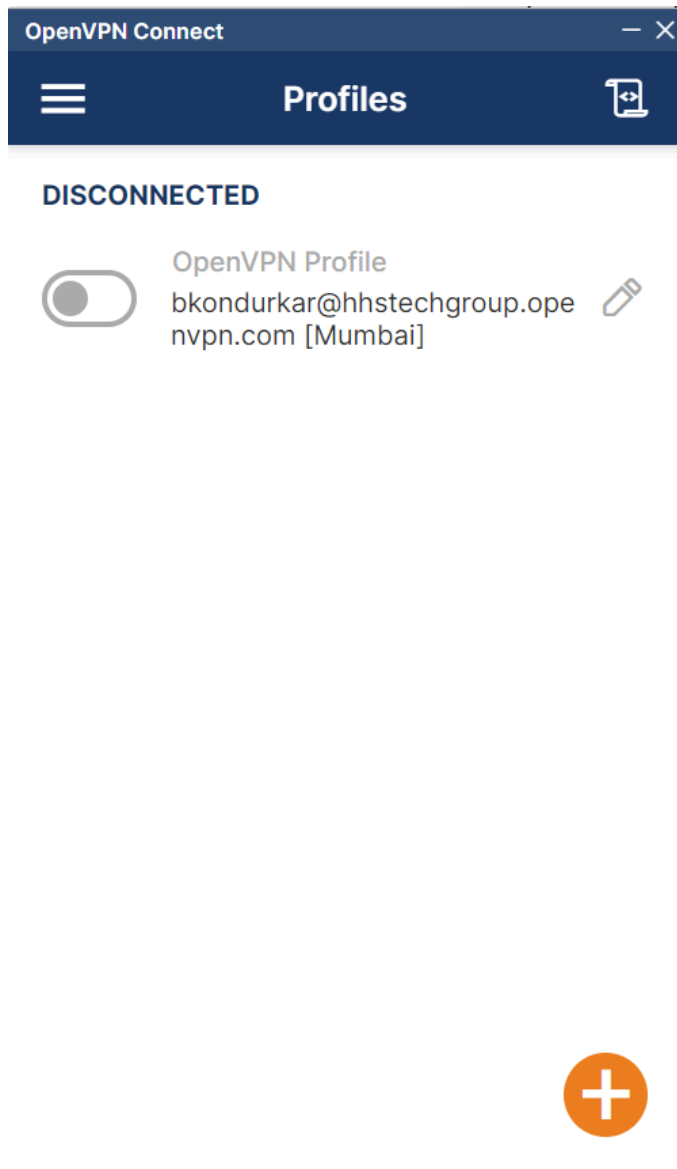

10. Choose the region closest to your location. For example, if you are in India, select the Mumbai region.

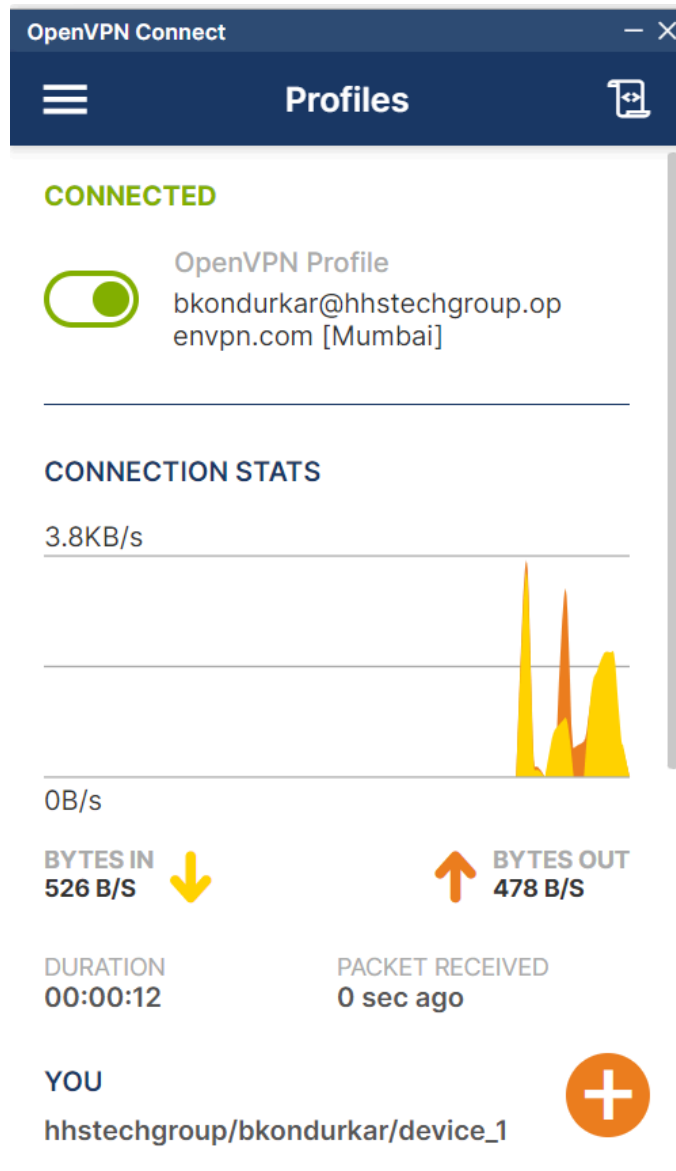

11. Once you choose a region and click on "Continue," the request will redirect to the OpenVPN client application. You will then need to click on the "Confirm" button.

12. Once you click on the "Confirm" button, your profile will be configured and visible in the OpenVPN client.

13. Now you can enable or disable your VPN access as per your requirement. **Thank you!**

If someone is using a Linux operating system on their laptop or machine, they can follow these steps to install the OpenVPN client:

1. Install Linux client:
